

The results for Georgia may be inaccurate due to database errors. Many of their trunk groups were converted from finals to high-usage for the Olympics. Due to the massive changes, the records may not properly reflected that change and thus is shown as a final even though it's high-usage overflowing to another final.

- c. CTTG (Common Transport Trunk Group) - This category contains the service performance results of final trunks between the BST end office and BST tandem. As previously mentioned, these trunk groups primarily handle interLATA and intraLATA toll traffic, and began carrying local traffic between the access tandem and BST end offices with the advent of CLEC interconnection.

Each month, two reports showing the CTTG trunk service performance results are sent to all interested parties. This report has been distributed since the mid 1980s. Then, as now, most of the recipients are IXC's since these trunk groups are used predominantly to transport calls between them and end offices homing on the access tandems. Interested CLEC can receive a copy of these two reports which shows the following:

- i. One-page Statistical Summary for BST and for Non-Bell Entities. This report contains the following:

- Total number of CTTGs
 - Total number of CTTGs with measurements and processed mechanically
 - Percent of CTTGs with data
 - Total number of CTTGs with blocking exceeding the MBT

- ii. A floppy disk datafile containing all of the CTTGs. The file is formatted in accordance with industry standard interface requirements as specified in Bellcore Special Report SR STS-000317. Listed below are some of the information for each CTTG that are contained in the datafile:

- Name of the Trunk Group
 - Trunks In-Service
 - Percent Blocking
 - Busy Hour
 - Number of Days of Data Used to Calculate the Blocking DBO (Design Blocking Objective) & MBT (Measured Blocking Threshold)

Number of Consecutive Reports the CTTG Was Reported with Blocking	Date of the Data Period	Remarks Explaining the Blocking
---	-------------------------	---------------------------------

A summary of the CTTG monthly trunk service performance results is sent to the FCC annually. This was sent quarterly until it was changed recently to an annual reporting. The data to the FCC is contained in Lines 180-190 of the FCC Report 43-05 ARMIS Service Quality Table 3. (See Attachment 1 which shows results for calendar year 1996.)

Several years ago, the industry established an objective of 2% or less, to be met on a company-wide basis by the Local Exchange Carriers. No objective for individual state subdivision was established due to the smaller universe. Over the years, BST has far-exceeded the industry objective of 2.0%. In addition, BST is the only LEC (Local Exchange Carrier) to our knowledge that reports CTTG trunk service performance regardless of the cause(s). BST includes results, such as abnormal weather, even though they are beyond the control of BST.

4. Considerations In Analysis of Trunk Service Performance

Listed below are considerations to keep in mind when comparing or analyzing trunk service performance:

- a. In most locations, traffic from a BST end office to the CLEC end office, or from the CLEC end office to a BST end office will go on a direct trunk group if there is one, or switch through the access tandem. If the call is switched through the access tandem, it would traverse the CTTG between the access tandem and end office. Thus, service performance results from the "CLEC Trunk Group Service Report Summary" and "BST CTTG Results Reported to FCC" will provide a good assessment on the quality of the service provided on trunk groups carrying traffic to CLECs. This could then be compared to the service performance results for "Local Network Trunk Group Service Report Summary" which provides a good assessment on the quality of service provided on trunk groups carrying local service traffic for BST retail customers.
- b. On trunk groups ordered by BST from the CLEC, there is the possibility of trunk blocking if the CLEC sold services to an Internet Service Provider or a very large customer, and not plan or tell BST in advance about the increase in traffic load. BST's position is that we do not want abnormal blocking for

traffic from our end users to the CLECs since the end users will perceive that BST is the one providing poor service, and thus possibly migrate to a CLEC at a later date. When a BST end user dials a local call, they do not know if the distant end is a BST, or CLEC, or non-Bell LEC end office. All they want is for BST to complete their calls without any undue blocking. If not, they would perceive BST and not the CLEC or non-Bell carrier as providing inadequate service. Anytime, there is a trunk blockage, it becomes a critical matter for BST to alleviate. The same attention, if not more, is made for trunk groups carrying traffic to a CLEC switch as for other trunk groups in the BST network.

- c. When comparing data for traffic switching through a tandem, one cannot simply add the trunk blocking for one trunk group to the trunk blocking for another group unless the two trunk groups had the busy hour in the same time period. For example, one trunk group on one side of the tandem had a busy hour of 10 a.m. during the month. It had blocking of 2.5%. The trunk group on the other side of the tandem had a 10 p.m. busy hour during the same time period. It had 1.5% blocking. For a call traversing those two trunk groups, the blocking is not 4.0% ($2.5\% + 1.5\%$). It less than that, and possibly none at all if the call is placed during one of the other hours. When adding up blocking, one has to look at the busy hours to see if they are coincidental.

Trunk Group #1:

8/18/97 Data

Trunks In-Service	432
Measured Blocking	14.6%
Busy Hour	10pm - 11pm

Additional Comments: The trunk group was increased from 312 trunks to 432 (+38%) on 8/8/97. An additional 240 (+56%) trunks was scheduled for completion on 8/28/97, but, was delayed due to CLEC problems.

Trunk Group #2:

8/18/97

Trunks In-Service	264
Measured Blocking	8.6%
Busy Hour	10pm - 11pm

Additional Comments: The trunk group was increased from 144 to 264 (+83%) trunks on 8/13/97. In addition, 240 (+167%) direct end office trunks were added to provide further relief for this trunk group.

Past Data:

08-11-97	144	249	9.0%	10-11pm

The above data shows traffic increasing by 20 folds in two months. The group had a utilization rate of approximately 20%, which is very low. Right before it went to 100% utilization, a 100% increase in the trunk group size was made. This was still not enough to handle the traffic increase in the last three weeks.

DETAILS ON TRUNKS ORDERED BY BST FROM CLECs

Trunk Group #3:

8/18/97

Trunks In-Service	288
Measured Blocking	9.5%
Busy Hour	9pm - 10pm

Additional Comments: The trunk group was increased from 288 to 528 (+83%) on 8/24/97.

Past Data:

This trunk group had an approximate utilization rate of 80%. Then, starting in 7/21/97, the traffic load increased by approximately 50% from the previous week.

Trunk Group #4:

8/18/97

Trunks In-Service	648
Measured Blocking	7.2%
Busy Hour	9pm - 10pm

Additional Comments: The trunk group was increased from 552 to 648 (+24%) on 8/18/97.

Past Data:

08-04-97	552	894	20.6%	9-10pm
08-11-97	552	888	20.1%	9-10pm

The above data shows traffic increasing by over 4 times in three months. In early May, the group had utilization rate of approximately 50%. A month later (6/9/97), the utilization rate was 65%. Then, one month later, the traffic load increased by approximatley 100%, which sent the utilization rate went up to 140%. In the one week period from 7/21/97 to 7/28/97, the required trunks to handle the traffic went up 50%, from 642 to 983. Even with a 43% increase in the trunk group size, the trunk group is still experiencing blocking.
